

## **Propane Grill Instructions**

1. Attach propane tank to grill using attachment hanging from side of grill.
2. Ensure propane tank are installed and secured properly.
3. Turn all knobs into the OFF position.
4. Slowly turn open propane tank valve.
5. Push and turn runner tube KNOB (red knob or knobs) fully counter-clockwise to "ON" position.
6. Insert a lit match through oblong hole in front panel.
7. Ensure the entire runner tube is lit using the sight holes located on the front panel between the burner knobs.
8. Open desired burner valves (Black knobs). Ensure that burners light completely from runner tube.

### To Shut Down:

1. Turn all knobs to "OFF" position.
2. Shut off main gas by closing tank valves.
3. Disconnect propane.

### Important Reminders:

If runner tube will not properly light or stay lit, shut off gas supply. Wait at least 5 minutes before attempting to re-lite.

If burners or runner tubes fail to light or remain lit, shut-off, disconnect gas, and discontinue use.
